DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

In the specification:

Insert following at line 1 of the first page of the specification.

--Cross-reference is made to US. Application Serial No.10/147,933 which is a continuation Reissue Application of U.S. Patent 5,548,646.--

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance: Claims 1-31,34-39,54-59,69-73 are allowed.

Claims 1,11: Prior art of record does not teach key management information providing mechanism for identifying the predetermined encryption method, and a new address header representing the source and destination for the first data packet, generating a modified first data packet; transmitting the first data packet or the modified first data packet from the first bridge computer via the internetwork to the second computer network; intercepting the first data packet or the modified first data packet at the second bridge computer; if the second bridge computer; if the encapsulation header has been appended to the first data packet, reading the encapsulation header, and determining therefrom whether the first data packet was encrypted.

Claims 6,7: Prior art of record does not teach a second table stored in second memory including a correlation of at least one of the first host computer and the first network with one of

the second host computer and the second network, respectively and instructions stored in second memory for intercepting modified first data packet upon arrival at second network, determining whether correlation is present in second table, and if so, then executing decryption of first data packet according to predetermined encryption/decryption mechanism, and transmitting the first data packet to the second host computer.

Claim 14: Prior art of record does not teach instructions stored in first memory for executing encryption according to predetermined encryption/decryption mechanism of at least a first one of one or more data packets, when at least one predetermined criterion is met, for generating a new address header for first data packet and transmitting first data packet to second host, new address header identifying broadcast addresses of the first and second computer networks, encapsulation header including at least new address header.

Claims 16, 57: Prior art of record does not teach instruction stored in second memory for intercepting first data packet before departure from first network, determining whether correlation is present, and if so, then executing encryption of first data packet according to predetermined encryption/decryption mechanism, generating a new address header including a mechanism for identifying predetermined encryption/decryption mechanism and appending new address header to first data packet, thereby generating a modified first data packet on to the second host computer.

Claim 17: Prior art of record does not teach in the first bridge computer, generating and appending to the first data packet an encapsulation header including key management information providing a mechanism for identifying the predetermined encryption method and a new address header representing the source and destination for the data packet, thereby generating a modified first data packet and transmitting the first data packet or the modified first data packet from the first bridge computer via the internetwork to the second computer network.

Claims 18,20,22,24: Prior art of record does not teach information stored in the memory of the bridge correlating the first and second computer and instructions stored in the memory for intercepting the data packet, determining whether the information stored in the memory of the bridge correlates the first and second computers, and if so, decrypting at least a portion of the data packet to generate a new data packet including a new address header, and transmitting the new data packet onto the second computer.

Claims 26,36,38: Prior art of record does not teach determining whether the data packet should be encrypted upon reference to at least one of the source and destination identifiers; if the data packet should be encrypted, encrypting the data packet to produce an encrypted data packet; and generating a new header and appending the new address header to the encrypted data packet, thereby generating a modified data packet; wherein the new address header includes a mechanism for identifying an encryption method used to generate the encrypted data packet.

Claim 54: Prior art of record does not teach instructions stored in first memory for executing encryption of at least a first one of one or more data packets according to a predetermined encryption/decryption mechanism, when at least one predetermined criterion is met, for generating a new address header for first data packet and for appending an encapsulation header to first data packet and transmitting first data packet to second host, encapsulation header including new address header and a mechanism for identifying predetermined encryption/decryption mechanism.

Claims 58,59: Prior art of record does not teach determining whether data packet should be encrypted upon reference to at least one of the source and destination identifiers; if the data packet should be encrypted, encrypt the data packet to produce an encrypted data packet; generating a new address header storing at least one of a broadcast address associated with

the source and a broadcast address associated with the destination, and append the new address header to the encrypted data packet, thereby generating a modified data packet.

Claims 2-5,8-10,12-13,15,19,21,23,25,27-31,34-35,37,39,55-56,69-73 are allowed because of dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
